

# Quality Iron Designs

## Gate Specification Sheet

### 2005

1. All iron material is a minimum of 16 gauge.
2. All iron material is mig welded for strength.
3. All iron material is cleaned inside and out in a high pressure, heated phosphate wash.
4. All gates have a gloss black baked enamel **powder coat** finish.
5. All hinges are solid and welded to gate post and frame.
6. All gates use a welded, lockable gravity latch.
7. All double gates have a welded cane bolt (drop pin) and hardware.
8. All iron end tubes are capped on top.
9. All wood is top grade 1"x6" white incense cedar with natural finish.
10. All bolts and nuts are zinc plated.
11. All gates include zinc one way nail-ins to prevent theft after installation.
12. Optional springs are welded to gate frame and post.

Our gates are manufactured with only the finest materials available. Our manufacturing process far exceeds industry standards. Every gate that we install is made for each individual homeowner's gate opening, because of this we do not need to use any adjustable hinges or other adjustable hardware.
